**Notice:** The LED fixtures are 24V DC ONLY.

AC voltage connected directly to the fixtures will destroy the lighting system.

## Step 1 continued

Fixtures are wired together in single or multiple circuits.

Each circuit is dedicated to a single power system and may be arranged in rows or clusters, depending on installation.

A junction box with 1/2" trade size knock-outs is attached on top corner of each fixture.

- Power leads inside fixture junction box are polarized, red (+) and black (-).
- Wire size 18 AWG stranded.

Wiring from fixtures to V DC side of provided power supply is polarized, positive (+) to positive (+) and negative (-) to negative (-):

EcoPlus fixture red "+" to power supply **Vo+** [sheathed in **RED**]

EcoPlus fixture black "-" to power supply **Vo-** [sheathed in **BLACK**]

For power supply V DC wire size, see EL001180

Wire and additional junction boxes from the fixtures to the power supply provided by others.

Voltage drop will occur over long distances. For appropriate lengths and gauges, see Wire Sizing Chart.

Wire gauge must conform to local and national codes.

## Step 2: Wiring the power supply to source V AC

Run power to V AC side of the power supply. For power supply V AC wire size, see EL001180

Line to power supply **ACL** [sheathed in **BLACK**]

Neutral to power supply **ACN** [sheathed in **WHITE**]

Ground to power supply  (**GREEN/YELLOW**)

Wire gauge must conform to local and national codes.

Install the power switch on the V AC input side of the power supply.

### Step 3: Dimming requirements

Contact the Sky Factory if you plan on using a dimming system provided by others.

**Notice:** Dimming using non-approved systems may permanently damage LED's and will void the warranty!

#### Wiring a Sky Factory provided dimmer control:

To wire the 0-10V dimmer control (and external relay where specified), refer to wiring diagram included with dimmer and relay and EL001180.

Power system **DIM+** sheathed in **GRAY**

Power system **DIM-** sheathed in **BLACK**

### Step 4: Checking the polarity

**Notice:** CHECK THE POLARITY BEFORE TURNING ON POWER. MAKE SURE:

Red wires on the fixtures go to the "+" terminals of the power supply

Black wires on the fixtures go to the "-" terminals of the power supply

**IF THE SYSTEM IS WIRED BACKWARD, IT WILL DESTROY THE LED'S!**
